**Importance:** High

Hi Ben,

As per our discussion, the new release functionality will also be added in WMS (Order Allocation):

- New toolbar button **Release** – allows you to do a batch released of the picked orders.
- New tab **Released** – grid list to display Released orders in able for you to do the ShipOut.

Please make an ASR for this changes in WMS and please coordinate with Eddie or Raquel for other WMS related concerns.

Thanks and regards,

Mayller Lopez

Hi Ben,

Please note that Picked and Release transactions will only be available once it was only picked or released. Once it Shipout you would no longer be able to traceback as the Transactions is not currently catered for Picked and Release.

Hi Mayller,

We will do the testing on 30 Jan and if ok, to update the scanners on that day  
 Please also advise if the scans are traceable in system with timestamp.

Thank you & Regards,

Hi Ben,

RF Program enhancement has been done as per below requirements:

- Release Module – release items (load to truck), only Release orders will be able to ShipOut in WMS.
- Putaway – include validation of LP against SKU or Project Code.

You may drop by anytime for testing.

Hi Ben,

Yes, WMS currently cater to ShipOut once Pick is done. And with this changes, only Release orders you will be able to ShipOut in WMS and will not contain Picked? Please confirm.

Regards,

Hi Mayller,

Currently WMS only allows Shipped once Pick is done

Hence the process should be, Shipped can only be done once Release is done  
And Release can only be done once Pick is done

**Subject:** RE: ASN attribute RF pick  
**Importance:** High

Hi Ben,

With the changes in process flow, WMS will also need to modify to cater the Orders that has been Release. A new RF screen will be provided to **Release** the Picked items

Picked items will go for **Release (Load to truck)**, partial Picked will not be able to ShipOut from WMS.

Will there be a case if you picked all the item from one order will not be Release (Load to truck) it will go for ShipOut only? Hence Orders for **ShipOut** will contains **Picked** and **Released** items. Please confirm.

Thanks and regards,

Hi Mayller,

- 1) 1<sup>st</sup> scan = RF pick implemented. N is change to P
- 2) 2<sup>nd</sup> scan = scan LP again prior to loading of truck. P status change to R (example)

Hi Ben,

Just want to confirm the ff:

What are the information need to scan when loading to the truck?  
When loading to the truck, will it require a new pallet id?

Also could you provide a detailed process flow for this.

Thanks regards,

Mayller Lopez

**Subject:** RE: ASN attribute RF pick

Hi Mayller,

Think the easiest way to perform another validation scan just before loading to truck is to have another status eg R for Release

That means when pick list is created, status is N.  
After RF pick scan, status change to P  
The crates will consolidated pending truck pick up.  
At point of pick up, final scan to change status to R to confirm the crates to be loaded to truck.

Please advise when the testing can be done.

Hi Ben,

What do you mean by "tracked in system by login id?". As per RF application your logged-in id is validated in the system same logging-in to the WMS application.)

Hi Allen,

If the label from customer has a barcode that can be scanned then we can built it to the system.

As for the other concerns, will wait for Ben for more details.

Thanks and regards,

**Subject:** RE: ASN attribute RF pick

Mayller,

Can we explore having another scan to validate the crates released are according to the pick ticket.

Basically, we have control of the picking with the RF pick, we need to have another system check at point of release to ensure that correct crates are released

The other portion is at inbound, is there any module that is able to allow us to ascertain that the correct LP is pasted on the correct crate.

Customer would have a label whereby the project number is scannable, can we build it into our inbound process?

Ben will share more details with you

Best Regards

Mayller,  
Upon testing completion, roughly how long it will take for training and deployment

We may have to rush this a little as we have encountered a wrong ship problem just today and we intend to propose this as a system fix to tackle the problem

Eddie,  
Need your team assistance to give priority to this.

Thanks

Hi Ben,

As the program is ready for testing. Please advise when can you drop by here at SLC2 and bring the RF gun, alternately I can remote the computer where the RF scanner is plugged and do a remote installation of the new program just give us the IP address and make sure the RF gun is connected to the computer during installation.

Thanks and regards,

Mayller Lopez

Hi Benjamin,

As we have discussed last week that the process from ASN Change cannot be incorporate as outbound process. This is not possible.

However, we have developed the ASN Change into RF which allow you to carry out the same function in the WMS.

Regards

Hi Mayller,

From what I see

- 1) scan or enter ASN # for ASN attribute change
- 2) whole ASN change or scan single crate ID, that ASN attribute change?

Does it completely replace the previous function as attached?

Thank you & Regards,

Hi Ben,

The program is now ready, you may drop by here at SLC2 also please bring one RF scanner so we could also test it.

Note : Fields with \* asterisk is mandatory

Order Key \* 0000000012

Project Name 422215-DG-PROJ

Pallet ID 00001147

Pick Qty 1.0000

SKU	PalletID	Stat
0242-51209	00001155	N
MINT377	00001147	N
MINT122	00001151	N
MINT140	00001150	N

Pick Clear

Main

The Pick program will scan the Order Key and Project Name will be default according to Order Key. Once Pallet Id entered or scanned Pick Qty will populated. Once Pick button clicked. Item list Stat will be refreshed with Picked items.

**Subject:** RE: ASN attribute RF pick

Hi Mayller,

For location no.

Can you include a header for the project number as well?

Not sure why there is a need for shipped status

If Shipped, then it shouldn't be pickable

- 1) Admin creates order for project to be shipped
- 2) Admin prints picklist for picker
- 3) Picker ( 1 or more pickers) review picklist and plan pick route
- 4) Picker scans order key
- 5) Grid list populates ( max # of lines? 1 order can have upwards of 40 lines)
- 6) Qty is default 1. this info is redundant on grid list. Swap with crate id
- 7) User based on location on pick list proceeds to location
- 8) User identify correct crate. User scans crate id on physical crate
- 9) System validates crate is to be picked.
- 10) Grid updates status as picked. Multiple users are also able to view this.
- 11) User scans all crates. Grid updates pick complete.

Hi Ben,

With regards to **Location**, would you require it to be scanned by RF? From what we have discussed last week the user will verify the Location once location verified Pallet Id will scanned and then will be Pick. FYI the grid list will list all the SKU for the current Order Key and Stat will indicate if item is N-New, S-Shipped Out and P-Picked. Need your confirmation as soonest.

Note : Fields with \* asterisk is mandatory

Order Key \* 0000000004

Eddie,  
As spoken, kindly let us know when would be the best timeline that your team can deploy the RF pick,

We are into this as there was a recent error and customer is looking at how we can improve the process to further eliminate errors

Also as part of the new pricing schedule, we have indicated that there is a IT maintenance fee whereby we have indicated that it is the support of the IT in terms of day to day operations as well as for enhancement and development to the IT systems for AMAT program

Please assist so that we can be on the same page

Best Regards

Hi Ben,

ASN Attribute is used to change the Project Name.

Pick slip will only generate when order is created in the Order Management Screen.

For RF pick, please provide the process flow as per our discussion with KH yesterday. Currently, I have no resource available for RF Pick at this moment.

Regards

**Subject:** ASN attribute RF pick

Hi Raquel, Eddie,

There was a discussion with the customer and they would like to develop the RF pick function at the ASN attribute level.

That means at the update of ASN attribute,  
 System generate a pick slip.  
 Upon correct LP label scanned, the ASN attribute change is confirmed in system.

Please advise the timeline for this function
