Subject: To include barcode scan of batch number and Expiry date in bin scanning process
Attachments: RE: Implant Bin Return records
Importance: High

Hi Dennis,

We have a new request from JnJ to write all the expiry dates in the checklist for all sterile implants before sending out the bins.

This will be very tedious and a lot of work for our staff to handwrite all the expiry dates on the checklist before sending out the bins.

I realized that there is a barcode on the implant, indicating the batch and expiry date. I need this to be incorporated into the bin scanning process, i.e, ops team have to scan the 2nd barcode and the checklist will indicate the individual implant batch number and expiry date. If the expiry date is in the next 3 months, it should be highlighted in red. At the same time, I need the bin scanning report to include these info too. By the way, when will the bin scan report be ready?

I was told that this request were being put up before, but no action taken. Why is that so? Can we do it right now?

Best Regards,
Selene Ong
