RF modifications Intermec RF Changes.

(build 1.0.a) Aug 25 2015

NHG build 2.2cp – changes in PICK and PACK screen. Added UOM and fix the description to fit in one row. Screen below shows the build number. Make sure that the RF are all updated to have this new feature.

1. Original Move Screen

2. For this update: Pls check the Build number on the machine. It should be “1.0.a”

3. After modifications: the Move Screen now have the SKU, which need to scan first before the LP.

4. The screen above shows the system validation when the LP is scanned and the SKU is left blank.

5. When wrong combination of SKU and LP. This error will prompt since no SKU 234 for the given LP.

- The screen when the correct match if SKU and LP. You may then proceed with the move to the TO LOC.

Note: No changes made on PUTAWAY module.

Technical Notes:

Changes Made: .Net source codes only.
