

Hi, Raquel

I have checked with Winnie, the definition in the script for qty is define as “pack size qty”, which means the below logic is wrong. Pls help to make change on the below:-

Orderkey	Part For	PO No.	Customer P/N	SKU	Line No	Pack size		Total label printed
00005091	0000001100	4501473237	9EST125Z	1001-8128	00001	1.0000	Y	1.0000
00005091	0000001220	4501473237	9FIP390Z	5005118	00002	3.0000	Y	3.0000

1. User to retrieve by Pack key # / DN#
2. In this screen, allow user to key in the pack size of each SKU,( system by default is 1)
3. System to auto calculate the number of label to be printed (based on order qty per line and pack size input by user)
4. For those SKU with multiple pack size, there will be a pop out screen for user to key in more than 1 pack size and also the qty to be printed
5. As for the report, system to capture total number of labels printed
6. To add in additional column – total order qty

Thanks & Best regards
