Code	Description	Short	Long
0102			
102	102		
3	3		

New Code Lookup (“CONSUMABLE”) is setup to consider a consumable skugroup. If I is defined here as code, then it is considered as consumable and will only be allowed to move to a location which is defined as CONS.

```
select PutAwayLoc, * from dbo.loc
```

PutAwayLoc	Loc	Cube	Length	Width	Height	Location
CONS	A1115G1	0	0	0	0	PALLET
NULL	A1212J2	0	0	0	0	PALLET
NULL	A1311E2	0	0	0	0	PALLET
NULL	A1323C1	0	0	0	0	PALLET
NULL	A1418L2	0	0	0	0	PALLET
NULL	A1515C1	0	0	0	0	PALLET
NULL	A1526L2	0	0	0	0	PALLET
NULL	A1621J1	0	0	0	0	PALLET
NULL	A1716E2	0	0	0	0	PALLET
NULL	A1811C1	0	0	0	0	PALLET
NULL	A1825E2	0	0	0	0	PALLET
NULL	A1920C1	0	0	0	0	PALLET

An example above, a location which is “CONS”. And below the LP which has SKU consumable.

```
select * from dbo.LOTxLOCxID where Id = 'a00007388'
and qty > 0
select SKUGROUP, * from SKU where SKU = '4576203'
```

Lot	Loc	Id	StorerKey	SKU	Qty
0000007038	H0826E1	A00007388	KM	4576203	1.0000

(1 row(s) affected)

SKUGROUP	StorerKey	Sk
0102	KM	45

(1 row(s) affected)

In this test, the location above is not defined as “CONS” but the SKU under this LP is a consumable.

Since the SKU is a consumable and the location it is being moved is not CONS, an error is being prompted. Otherwise it will be moved as normal.

#### Technical Notes:

*Changes in .Net codes*

*MSQL : modified [dbo].[SCH\_WM5\_CHKPALLETVALIDLOCMOVE]*
