Hi Xu Peng,

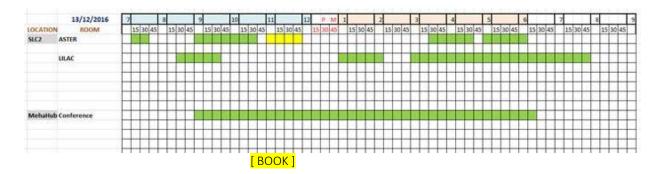

An interesting task that you may undertake.

Current Search for room availability is not very effective and user has no idea on when the room is empty.

In order to ease this, a screen like this would be handy

The date shall be changed...

1. Come up with a screen to show the greens (i.e) booked. When the cells are brosed with mouse to show in a small popup who has booked.

2. When a consecutive empty cells are clicked, mark them as yellow and then click the BOOK button, the system then invoke the 'Create reservation' screen

By populating the Date, StartTime, ed Time, username, room name etc so that User could easily book the slot.

Based on this suggestion, you can think of a very good screen where the same screen can display for a Given room, for all dates as

Given below:

SEC5	ASTER	7	8	9	10 1	AUVIO.	12 P M	1	2 3		4	5	6	7 8	1.30
	Date	15 30 45	15 30 45	15 30 45	15 30 45	15 30 45	15 30 45	15 30 45	15 30 45 1	30 45	15 30 45	15 30 45	15 30 45	15 30 45	15 30 45
TUE	13/12/2016					1000				22/25					HH
WED	14/12/2016					ш									
THURS	15/12/2016														
FRI	15/12/2016					ш		ш		#					Ш
SAT	16/12/2016					ш		ш		#					Ш
SUN	17/12/2016					ш							###		
			#		###				11111				###	###	
	< Next 7 days >					ООК		Ш	ЩШ				Ш	Ш	Ш

Hint: You may write a stored procedure that will return data as

Let me know how you would like to do this requirement.

Thanks.
